

Farm Implement Lubricant

Looking to increase reliability through effective lubrication, the largest manufacturer of Lawn, Garden and Agriculture equipment selected Super Lube® Multi-Purpose Grease and Oil with Synolon® (PTFE) to replace their existing lubricant products.

The Super Lube® not only had to offer better lubricating qualities, but it also had to be compatible and be capable of mixing with the existing grease in the shafts, bushings and bearings of the field equipment.

Super Lube® has worked so well, that it is offered as private labeled items by the manufacturer in a variety of aerosol, grease and oil products.
