

Rotary Tattoo Machine

A German manufacturer of rotary tattoo machines claims that “in the near future you will see more artists working with rotaries because of the benefits”. They have created the “elite of rotary tattoo machines that are top quality and will run for years without problems”, provided they are properly lubricated. Every machine is factory lubricated with Super Lube® Multi-Purpose Grease w/PTFE. The manufacturer not only applies Super Lube® as a factory fill, but also supplies it with every machine it sells.
